Course: PYTHON   USN:4AL16EC029

Topic: **Data Types**   Semester & Section:6 B

AFTERNOON SESSION DETAILS

Report −

1. Lists:

student_grades1=[6.1,5.2,8.4,5.2]

sum1=sum(student_grades.values())

length=len(student_grades)

result=sum1/length

print ("student grade is")

print(result)

2. Ranges:

>>>list(range (1,10))

Output is: [1,2,3,4,5,6,7,8,9]

3.attributes:

>>>dir(int)

>>>dir(str)

>>>dir(float)

>>>help(str.upper)

>>>dir(__builtins__)

>>>help(len)

✓Python got his name not from the snake, but from Monty Python's Flying Circus, a favorite comedy series of Guido van Rossum, the creator of Python.

4.how to find out Which code we use:

>>>dir(list)

>>>"hello".upper()

"HELLO"

5.steps of learning python:

(a).syntax

(b).data structure

(c). algorithm

6.dictionary types

　 1.dictionary

　Ex:　student_grades={"manju": 3,"gowda": 4,"bhuvan": 5}

　　　sum1=sum(student_grades.values())

　　　length=len(student_grades)

　　　result=sum1/length

　　　print ("student grade is")

　　　print(result)

✓Did you know that Python was first released in 1991? Python 2 was released in 2000, and Python 3 (the current version) in 2008.

7.tuple types

8.how to use data types in real world

✓Python is mainly used for automation purposes, web apps, and data science. Many big companies like Instagram, Facebook, and Amazon use Python in different parts of their products. For example, Facebook uses Python to process images.

9.summary

    1.integers

    2.floats

    3.strings

    4.lists

    5.dictionaries

    6.tuples

    7.dir

    8.help
